

POLICE OFFICERS RETIREMENT SYSTEM (PORS)
ACTUARIAL VALUATION REPORT
AS OF JULY 1, 2012

January 11, 2013

Public Employee Benefit Authority
South Carolina Retirement System
P.O. Box 11960
Columbia, SC 29211-1960

Subject: Actuarial Valuation as of July 1, 2012

Dear Members of the Board:

This report describes the current actuarial condition of the Police Officers Retirement System (PORS), determines the calculated employer contribution rate, and analyzes changes in this contribution rate. In addition, the report provides information required by the Retirement System in connection with Governmental Accounting Standards Board Statement No. 25 (GASB 25), and gives various summaries of the data. Results of this report should not be used for any other purpose without consultation with the undersigned. Valuations are prepared annually as of July 1, the first day of the plan year for PORS. This report was prepared at the request of the Public Employee Benefit Authority (Board) and is intended for use by the South Carolina Retirement System (SCRS) staff and those designated or approved by the Board.

FINANCING OBJECTIVES AND FUNDING POLICY

The employer and member contribution rate is determined in accordance with Section 9-11-225 of the South Carolina Code. As specified by the Code, in the event the scheduled employer and member contribution rate is insufficient to maintain a thirty-year amortization period for financing the unfunded liability of the System, the Board shall increase the employer and member contribution rates in equal amounts, as necessary, to maintain a funding period that does not exceed thirty years. The contribution rate determined by a given actuarial valuation becomes effective twenty-four months after the valuation date. In other words, the contribution rate determined by this July 1, 2012 actuarial valuation will be used by the Board when certifying the employer and member contribution rates for the year beginning July 1, 2014 and ending June 30, 2015.

According to State code, the Board is not permitted to decrease the employer and member contribution rates until the funded ratio of the plan is at least 90%. Also, any decrease in the rates must maintain the 5.00% differential between the employer and member contribution rates.

If new legislation is enacted between the valuation date and the date the contribution rate become effective, the Board may adjust the calculated rate before certifying them, in order to reflect this new legislation. Such adjustments are based on information supplied by the actuary.

PROGRESS TOWARD REALIZATION OF FINANCING OBJECTIVES

The funded ratio (the ratio of the actuarial value of assets to the actuarial accrued liability) is a standard measure of a plan's funded status. In the absence of benefit improvements, it should increase over time, until it reaches at least 100%.

The funded ratio of the System decreased from 72.8% (after reflecting Act 278) to 71.1%. This decrease was primarily due to the continual recognition of the extraordinary investment loss that occurred in prior years. Absent favorable experience, we expect the funded ratio will continue to decrease for the next several years as those investment losses are fully recognized in the development of the actuarial value of assets.

If the market value of assets had been used in the calculation instead of actuarial (smoothed) value of assets, the funded ratio for the System would have been 61.0%, compared to 64.8% in the prior year (after reflecting Act 278). The decrease in the funded ratio on a market value basis is due to unfavorable investment experience during the last plan year. In particular, the investment return for the year was 0.4% on a market value basis.

ASSUMPTIONS AND METHODS

Except for the rates of disability incidence and retirement, the actuarial assumptions used to perform this valuation remain unchanged from the prior valuation, including the use of a 7.50% investment return assumption. The rates of disability incidence and retirement were modified to more appropriately model the system's experience as a result of the enactment of Act 278. South Carolina State Code requires that an experience analysis that reviews the economic and demographic assumptions be performed every five years. The next experience analysis is scheduled for 2016.

It is our opinion that the recommended assumptions are internally consistent and reasonably reflects anticipated future experience of the System. The actuarial assumptions and methods used in this report comply with the parameters for disclosure that appear in GASB 25.

The results of the actuarial valuation are dependent on the actuarial assumptions used. Actual results can and almost certainly will differ, as actual experience deviates from the assumptions. Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contribution rates and funding periods. The actuarial calculations are intended to provide information for rational decision making.

BENEFIT PROVISIONS

The benefit provisions reflected in this valuation include the benefit changes that were enacted as a result of Act 278. The legislation impacted current members as well as those employees who will become members after June 30, 2012. The most significant changes impacting current members include:

- Effective July 1, 2012, the member contribution rate for all employees will increase by 0.50% each subsequent year until an 8.00% contribution rate is attained beginning July 1, 2014. The employer contribution rate will increase to 12.50% of pay beginning July 1, 2013, and to 13.00% of pay beginning July 1, 2014. In the event these contribution rates are insufficient to maintain a 30-year amortization period, the Board shall increase the member and employer contribution rates by an equal amount (i.e. maintain a 5.00% differential) as necessary to maintain a 30-year funding period. The employer and member contribution rates may not decrease until the plan attains a 90% funded ratio.
- Eligible retirees and surviving annuitants will receive an annual increase in their pension benefit equal to the lesser of 1.00% of their retirement allowance or \$500 per annum.
- Effective July 1, 2012, inactive members of the retirement system will no longer accrue future interest on their account balance attributable to their contributions.
- Members who retire after January 2, 2013 and subsequently become employed by a participating employer of the retirement system may earn up to \$10,000 annually without affecting their retirement allowance. Retired members who earn in excess of \$10,000 will have their retirement allowance suspended for the remainder of the calendar year. However, this earning limitation will not apply to rehired members who attain age 57 at the time of their initial retirement.
- Effective January 2, 2013, the cost of purchasing qualified service credit will be equal to the greater of 16% of pay per year of service or the true actuarial cost. Similarly, the cost of purchasing nonqualified service credit will be equal to the greater of 35% of pay per year of service or the true actuarial cost.
- Members who apply for a disability retirement benefit after December 31, 2013 must provide proof to the system that they are entitled to Social Security disability benefits after their third year of retirement in order to continue receiving their disability retirement allowance. The calculation of the disability allowance will be based on the member's credited service projected to age 55, but subject to a maximum of 25 years.

Employees who become members after June 30, 2012 (Class Three members) will also be impacted as follows:

- Class Three members must attain eight (8) years of earned service to be eligible for retirement benefits.
- Members will be eligible for an unreduced retirement benefit upon: (1) attaining age 55 with eight or more years of earned service or (2) attaining 27 years of credited service.

- The average final compensation will be determined using a twenty-quarter averaging period (i.e. a five year average).
- Unused sick leave will be excluded in the member's credited service and unused annual leave will be excluded in determining the member's average final compensation when calculating the amount of the member's pension benefit at retirement.

The changes instituted by Act 278 have been fully reflected in this actuarial valuation. Please refer to Appendix B of this report for a summary of the principle plan provisions.

DATA

Member data for retired, active and inactive members was supplied as of July 1, 2012, by the SCRS staff. The staff also supplied asset information as of July 1, 2012. We did not audit this data, but we did apply a number of tests to the data, and we concluded that it was reasonable and consistent with the prior year's data. GRS is not responsible for the accuracy or completeness of the information provided to us by SCRS.

CERTIFICATION

We certify that the information presented herein is accurate and fairly portrays the actuarial position of PORS as of July 1, 2012.

All of our work conforms with generally accepted actuarial principles and practices, and is in conformity with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of South Carolina Code of Laws and, where applicable, the Internal Revenue Code, ERISA, and the Statements of the Governmental Accounting Standards Board.

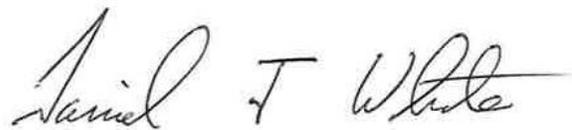

The undersigned are independent actuaries and consultants. Mr. Newton and Mr. White are Enrolled Actuaries and Members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries. Both are experienced in performing valuations for large public retirement systems.

Sincerely,

Gabriel, Roeder, Smith & Co.

Joseph P. Newton, FSA, MAAA, EA
Senior Consultant

Daniel J. White, FSA, MAAA, EA
Senior Consultant

¹ The contribution rates determined by the 2012 valuation are established by Section 9-11-225 of the South Carolina Code and become effective for the fiscal year beginning July 1, 2014. The employer contribution rates shown above includes the cost for incidental death benefits.

EXECUTIVE SUMMARY (CONTINUED)

The unfunded actuarial accrued liability increased by \$0.1 billion since the prior year’s valuation to \$1.5 billion. The single largest source of this increase is due to the continual recognition of deferred investment losses in the actuarial value of assets (i.e. \$0.1 billion was recognized in the July 1, 2012 valuation). There is still \$0.5 billion in deferred investment losses as of the valuation date. Absent favorable investment experience, those deferred losses will gradually be reflected in the actuarial value of assets over the next few years.

Below is a chart with the System’s historical actuarial value of assets and actuarial accrued liability.

The employer and member contribution rates in effect for fiscal year 2014 are no longer sufficient to maintain a funding period under 30 years. Therefore, the employer and member contribution rates for fiscal year 2015 will need to increase to satisfy the 30-year funding requirement specified in Section 9-11-225 of the South Carolina Code. Specifically, the employer contribution rate will need to increase from 12.84% to 13.41% and the member contribution rate will increase from 7.84% to 8.41%. Absent legislative changes or significantly favorable experience, employer and member contributions rate will increase for the next several years as existing deferred investment losses become recognized in the actuarial value of assets.

SECTION B
DISCUSSION

DISCUSSION

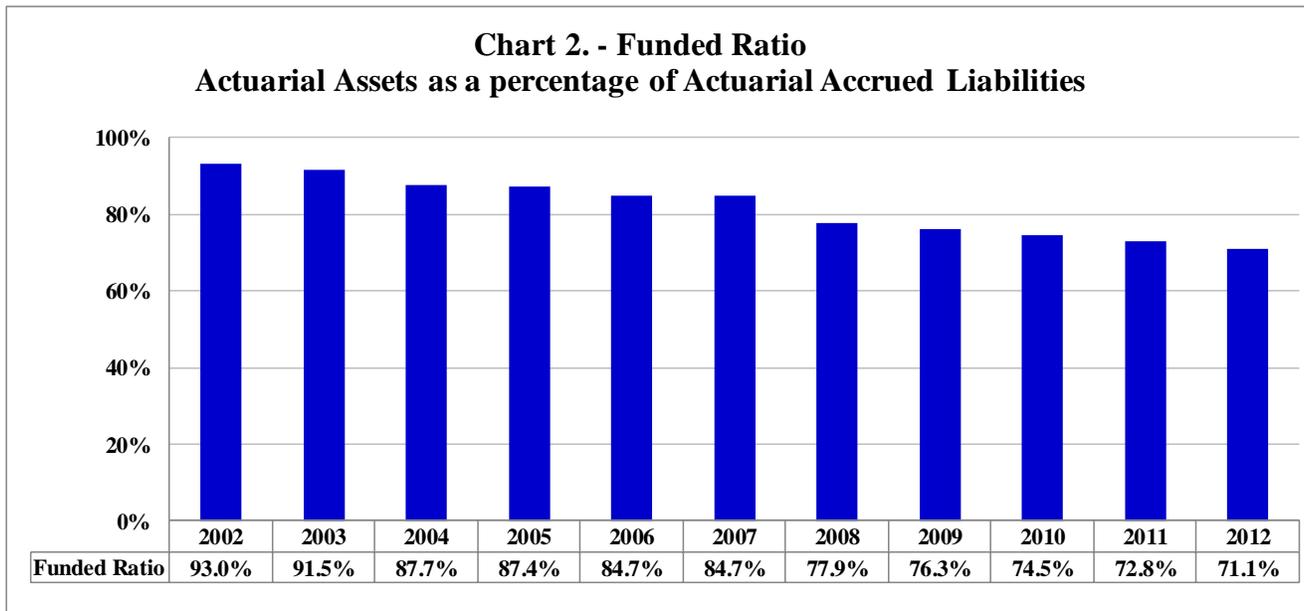

The results of the July 1, 2012 actuarial valuation of the Police Officers Retirement System are presented in this report. The primary purposes of the valuation report are to depict the current financial condition of the System, determine the annual required contribution, and analyze changes in the System's financial condition. In addition, the report provides information required by the Retirement System in connection with Governmental Accounting Standards Board Statement No. 25 (GASB 25), and it gives various summaries of the data.

This section discusses the determination of the current funding requirements and the System's funded status, as well as changes in financial condition of the retirement system.

All of the actuarial and financial Tables referenced by the other sections of this Report appear in Section C. Section D provides member data and statistical information. Appendices A and B provide summaries of the principle actuarial assumptions and methods and plan provisions. Finally, Appendix C provides a glossary of technical terms that are used throughout this report.

Funding Progress

The funded status of the System is shown in Table 10, Schedule of Funding Progress. The funded ratio decreased from 72.8% (after reflecting Act 278) to 71.1%. This decrease in the funded status over the last 10 years has generally been due to a combination of: (i) the actual investment experience being less than the System’s expected investment return assumption and (ii) increases in the actuarial accrued liability due to the enactment of ad hoc cost of living adjustments to retirees during several of these years.

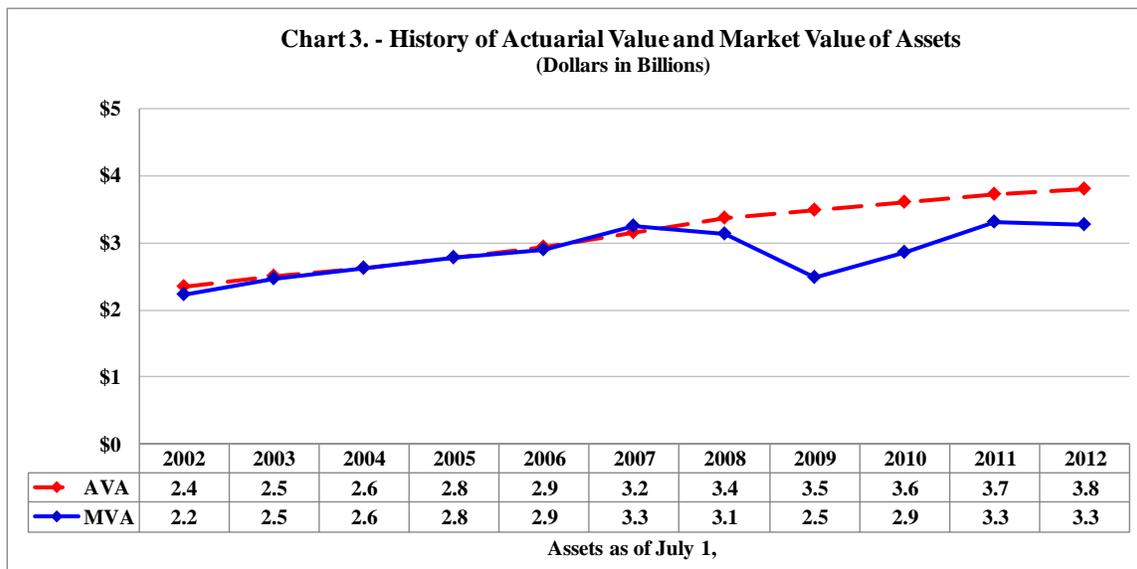

It is expected that the funded ratio (on an actuarial value of asset basis) will decline for the next several before it gradually improves, as deferred investment losses become recognized in the actuarial value of assets.

Asset Gains/ (Losses)

The actuarial value of assets (“AVA”) is based on a smoothed market value of assets, using a systematic approach to phase-in actual investment return in excess of (or less than) the expected investment income. This is appropriate because it dampens the short-term volatility inherent in investment markets. The expected investment income is determined using the assumed annual investment return rate and the actuarial value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses. Table 8 shows the development of the actuarial value of assets. The actuarial value of assets increased from \$3.7 billion to \$3.8 billion since the prior valuation.

The rate of return on the mean market value of assets during the prior plan year was 0.4%; which is below the 7.50% expected annual return. The return on an actuarial (smoothed) asset value was 3.9%. This difference in the estimated return on market value and actuarial value illustrates the smoothing effect of the asset valuation method.

The market value of assets is less than the actuarial value of assets, which signifies that the retirement system is in a position of deferred losses. Therefore, unless the System experiences investment returns in excess of the assumed rate of return, the future recognition of these deferred losses is expected to increase the unfunded actuarial accrued liability and decrease the System’s funded ratio over the next few years.

Tables 6 and 7 provide asset information that was included in the annual financial statements of the System. Also, Table 9 shows the estimated yield on a market value basis and on the actuarial asset valuation method.

Actuarial Gains/ (Losses) and the Funding Period

The annual actuarial valuation is a snapshot analysis of the benefit liabilities, assets and funded position of the System as of the first day of the plan year. In any one fiscal year, the experience can be better or worse from that which is assumed or expected. The actuarial assumptions do not necessarily attempt to model what the experience will be for any one given fiscal year, but instead try to model the overall experience over many years. Therefore, as long as the actual experience of the retirement system is reasonably close to the current assumptions, the long-term funding requirements of the System will remain relatively consistent.

The system experienced a net gain due to the liabilities (salary and other liability experience) of \$1.4 million, which is less than a 0.1% gain when compared to a total actuarial accrued liability (“AAL”) of \$5.4 billion. The table below shows the source of the gains and losses and the impact of those gains and losses on the UAAL.

Reconciliation of UAAL	
(Dollars in thousands)	
• Beginning of Year UAAL	\$1,394,260
- Interest on UAAL	104,570
- Amortization payment with interest	(83,655)
- Assumption/method changes	0
- Asset experience	134,736
- COLA	0
- Salary experience	(35,038)
- Other liability experience	33,686
- Legislative changes	0
• End of Year UAAL	\$1,548,558

The employer and contribution rates in effect for fiscal year 2014 are no longer sufficient to satisfy the 30-year funding requirement in the State code. Below is a table reconciling the change in the funding period from the prior year’s valuation based on the contribution rates that go into effect for fiscal year 2014.

Change in Funding Period (Years) Based on the Employer and Member Contribution Rates in Effect for Fiscal Year 2014	
• Prior Year (after reflecting Act 278)	30.0
- Expected experience	(1.0)
- Legislative changes	0.0
- Assumption and method changes	0.0
- Scheduled increase in the employer and member contribution rate	(1.6)
- Asset experience	5.3
- Demographic experience	4.2
- Total change	6.9
• Current Year Valuation (before reflecting the required increase in the contribution rate)	36.9

While the plan’s liability experience resulted in a slight reduction in the unfunded actuarial accrued liability, it produced an increase in the system’s funding period. This occurred because the contribution rate, which is defined as a percentage of payroll, is calculated based on the anticipation there would be a 3.50% increase in the total payroll of the system. However, actual covered payroll decreased by 6.28% from fiscal year 2011 to 2012. As a result, the contribution rate, as a percentage of pay, must increase in order to maintain the necessary dollar amount of monies to finance the unfunded liability. The effect is magnified because PORS has a large unfunded liability as a percentage of the covered payroll.

Absent favorable investment experience, we expect the employer and member contribution rates will be required to increase in future years as remaining deferred investment losses become fully recognized in the actuarial value of assets.

GASB No. 25 and No. 27 Disclosures

Accounting requirements for the Retirement System are provided by the Governmental Accounting Standards Board Statements No. 25 (“GASB 25”) and No. 27 (“GASB 27”). Table 10 shows a historical summary of the funded ratios and other information for the System. Table 11 shows other information needed in connection with the required disclosures under GASB 25. GASB 27 governs reporting by the employers of government-sponsored retirement plans.

GASB 25 requires that plans calculate an Annual Required Contribution (“ARC”), and, if actual contributions received are less than the ARC, this must be disclosed. The ARC is calculated in accordance with certain parameters. In particular, it includes a payment to amortize the UAAL. This amortization payment must be computed using a funding period no greater than thirty (30) years. For this disclosure, SCRS treats the Board-established contribution rate as the ARC, as long as this produces a funding period that does not exceed 30 years.

Actuarial Assumptions and Methods

In determining costs and liabilities, actuaries use assumptions about the future, such as rates of salary increase, probabilities of retirement, termination, death and disability, and an annual investment return assumption. Except for the rates of disability incidence and retirement, the actuarial assumptions and methods used to determine the results of the 2012 actuarial valuation are the same as those used for the prior year's valuation. The disability and retirement rates were updated to more appropriately reflect the anticipated plan experience as a result of the enactment of Act 278.

Appendix A includes a summary of the actuarial assumptions and methods used in this valuation.

It is our opinion that the assumptions are internally consistent, reasonable, and reflect anticipated future experience of the System. The actuarial assumptions and methods used in this report comply with the parameters for disclosure that appear in GASB 25.

Benefit Provisions

Appendix B of this report includes a summary of the benefit provisions for PORS. Act 278 became law in June 2012, which resulted in substantial changes to the benefit provisions in PORS. Below is a summary of the retirement provisions for Class Two members, members hired prior to July 1, 2012, and Class Three members, member hired after June 30, 2012.

Summary of Retirement Provisions for:

Class Two Members (members hired prior to July 1, 2012)

- Average Final Compensation (AFC) is based on the highest twelve (12) consecutive quarters of compensation. The determination of a member's AFC also includes up to 45 days of unused annual leave paid at termination. Monthly benefits are based on one-twelfth of this amount.
- The retirement benefit is equal to 2.14% of the member's AFC times the member's credited service (years). Credited service may include up to 90 days of unused sick leave.
- Members are eligible to commence their retirement benefit after they have (i) 25 years of credited service or (ii) attained age 55 with 5 years of earned service.
- At each July 1 after their first full year of retirement, annuitants will receive an automatic post-retirement benefit adjustment equal to the lesser of 1.00% of their retirement benefit or \$500 per annum.

Class Three Members (members hired after to June 30, 2012)

- Average Final Compensation (AFC) is based on the highest twenty (20) consecutive quarters of compensation. The determination of a member's AFC also will not include unused annual leave paid at termination. Monthly benefits are based on one-twelfth of this amount.
- The retirement benefit is equal to 2.14% of the member's AFC times the member's credited service (years). Credited service will not include unused sick leave.
- Members are eligible to commence their retirement benefit after they have (i) 27 years of credited service or (ii) attained age 55 with 8 years of earned service.
- At each July 1 after their first full year of retirement, annuitants will receive an automatic post-retirement benefit adjustment equal to the lesser of 1.00% of their retirement benefit or \$500 per annum.

¹ Covered payroll does not include payroll attributable to working retirees.
The valuation results for 2011 reflect Act 278.

Notes to Required Supplementary Information
(as required by GASB #25)

The information presented in the required supplementary schedules was determined as part of the actuarial valuation at the dates indicated. Additional information as of the latest actuarial valuation follows:

Valuation date:	July 1, 2012
Actuarial cost method:	Entry Age Normal
Amortization method:	Level percentage of payroll
Amortization period for GASB 25 ARC:	30-year open period ¹
Asset valuation method:	5-year smoothed market
Actuarial assumptions:	
Investment rate of return ²	7.50%
Projected salary increases ²	4.00% to 10.00% (varies by service)
Inflation	2.75%
Cost-of-living adjustments	0.00%

¹ The employer and member contribution rates are determined in accordance with Section 9-11-225 of the South Carolina Code.

² Includes inflation at 2.75%

APPENDIX A

ACTUARIAL ASSUMPTIONS AND METHODS

Summary of Actuarial Methods and Assumptions

The following presents a summary of the actuarial assumptions and methods used in the valuation of the South Carolina Police Officers Retirement System.

Investment Rate of Return

Assumed annual rate of 7.50% net of investment and administrative expenses composed of a 2.75% inflation component and a 4.75% real rate of return, net of investment and administration expenses.

Rates of Annual Salary Increase

Rates of annual salary increase are assumed to vary for the first 11 years of service to include anticipated merit and promotional increases. The assumed annual rate of increase is 4.00% for all members with 12 or more years of service.

The 4.00% rate of increase is composed of a 2.75% inflation component and a 1.25% real rate of wage increase (productivity) component.

Active Male & Female Salary Increase Rate		
Years of Service	PORS	
	Annual Promotional/Longevity Rates of Increase	Total Annual Rate of Increase Including 4.00% Wage Inflation
0	6.00%	10.00%
1	5.00%	9.00%
2	2.00%	6.00%
3	1.00%	5.00%
4	0.75%	4.75%
5	0.50%	4.50%

Active Member Decrement Rates

- a. Assumed rates of Service Retirement are shown in the following tables. The first table is for members who attain age 55 before attaining 25 years of service (27 years of service for Class Three). The second table is based on service and is for members who attain 25 years of service before age 55.

Annual Age Based Retirement Rates			Annual Service Based Retirement Rates*			
Age	PORS		Years of Service		PORS	
	Male	Female	Class Two	Class Three	Male	Female
55	20%	20%	25	27	18%	18%
56	14%	14%	26	28	13%	13%
57*	50%	50%	27	29	11%	11%

72	100%	100%				
73	100%	100%				
74	100%	100%				
75	100%	100%				

* Retirement rate is 50% at age 57, the first age the member is eligible to concurrently commence benefits and continue employment.

* Age first eligible to concurrently commence benefits and continue employment.

- b. Assumed rates of disability are shown in the following table. 25% of disabilities are assumed to be duty-related.

Disability Rates		
Age	PORS	
	Males	Females
25	0.1101%	0.1101%
30	0.1468%	0.1468%
35	0.2753%	0.2753%
40	0.3670%	0.3670%
45	0.5506%	0.5506%
50	0.6882%	0.6882%
55	0.0000%	0.0000%
60	0.0000%	0.0000%
64	0.0000%	0.0000%

*Rates reduced by 75% for service under 5 years

c. Active Member Mortality

Rates of active member mortality are based upon a client specific table with applicable multipliers to match the experience.

Active Mortality Rates (Multiplier Applied)		
Age	PORS	
	Males	Females
25	0.0338%	0.0186%
30	0.0653%	0.0264%
35	0.0978%	0.0467%
40	0.1234%	0.0790%
45	0.1614%	0.1248%
50	0.2171%	0.1767%
55	0.3776%	0.2516%
60	0.7443%	0.4454%
64	1.2430%	0.8222%
Multiplier	90%	90%

d. Rates of Withdrawal

Rate of withdrawal for active members prior to eligibility for retirement are based upon actual experience from 2002 through 2010. Rates are developed for each employee group and differ by gender and service. Sample rates are shown in the tables below.

Years of Service	Annual Withdrawal Rate	
	PORS	
	Male	Female
0	0.2500	0.2500
1	0.1800	0.1800
2	0.1400	0.1400
3	0.1200	0.1200
4	0.1070	0.1070
5	0.0954	0.0954
6	0.0850	0.0850
7	0.0758	0.0758
8	0.0675	0.0675

15	0.0302	0.0302
16	0.0269	0.0269
17	0.0240	0.0240
18	0.0214	0.0214
19	0.0191	0.0191
20	0.0170	0.0170
21	0.0151	0.0151
22	0.0135	0.0135
23	0.0120	0.0120

e. Post Retirement Mortality

Healthy retirees and beneficiaries – This valuation assumes fully generational mortality. The base mortality table is 115% of the RP-2000 Mortality Table with Blue Collar Adjustment. Future mortality improvements are assumed each year using Scale AA. The following are sample rates:

Nondisabled Annuitant Mortality Rates Before Projection (Multiplier Applied)		
Age	PORS	
	Males	Females
50	0.2774%	0.2257%
55	0.4825%	0.3214%
60	0.9511%	0.5691%
65	1.7870%	1.1958%
70	3.0772%	2.1429%
75	4.9601%	3.5521%
80	8.1129%	5.6296%
85	13.2339%	9.5565%
90	20.9021%	15.7189%
Multiplier	115%	115%

Life Expectancy for an Age 65 Retiree in Years				
Member	Year of Retirement			
	2015	2020	2025	2030
Male	17.8	18.2	18.6	19.0
Female	19.7	19.9	20.1	20.4

A separate table of mortality rates is used for disabled retirees based on the RP-2000 Disabled Retiree Mortality Table. The following are sample rates:

Disabled Annuitant Mortality Rates (Multiplier Applied)		
Age	PORS	
	Males	Females
50	1.7385%	0.6921%
55	2.1265%	0.9926%
60	2.5225%	1.3103%
65	3.0104%	1.6816%
70	3.7550%	2.2581%
75	4.9240%	3.1338%
80	6.5623%	4.3387%
85	8.4962%	6.0122%
90	11.0045%	8.4029%
Multiplier	60%	60%

Asset Valuation Method

The actuarial value of assets is based on the market value of assets with five-year smoothing applied. This is accomplished by recognizing each year 20% of the difference between the market value of assets and the expected actuarial value of assets, based upon the assumed valuation rate of return.

Expected earnings are determined using the assumed investment rate of return and the beginning of year actuarial value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses.

Actuarial Cost Method

The Entry Age Normal actuarial cost method allocates the plan's actuarial present value of future benefits to various periods based upon service. The portion of the present value of future benefits allocated to years of service prior to the valuation date is the actuarial accrued liability, and the portion allocated to years following the valuation date is the present value of future normal costs. The normal cost is determined for each active member as the level percent of payroll necessary to fully fund the expected benefits to be earned over the career of each individual active member. The normal cost is partially funded with active member contributions with the remainder funded by employer contributions.

An unfunded accrued liability exists in the amount equal to the excess of accrued liability over valuation assets. The amortization period of the System is the number of years required to fully amortize the unfunded accrued liability with the expected amount of employer contributions in excess of the employers' portion of the normal cost.

The calculation of the amortization period takes into account scheduled increases to contribution rates applicable to future years and payroll growth. Also, the calculation of the amortization period reflects additional contributions the System receives with respect to return to work retirees. These contributions are assumed to grow at the same payroll growth rate as for active employees. It is assumed that amortization payments are made monthly at the end of the month.

Unused Annual Leave

To account for the effect of unused annual leave in Annual Final Compensation (AFC) of Class Two members, the AFC for Class Two members is increased 3.75% at their projected date of termination or retirement.

Unused Sick Leave

To account for the effect of unused sick leave on credited service for Class Two members, the service of active Class Two members who retire is increased 3 months.

Future Post-Retirement Benefit Adjustments

Benefits are assumed to increase by the lesser of 1.00% annually or \$500 beginning on the July 1st following the receipt of 12 monthly benefit payments. The \$500 limit in the annual increase is not indexed to escalate in future years.

Payroll Growth Rate

The total annual payroll of active members (also applies to rehired retiree participants) is assumed to increase at an annual rate of 3.50%.

Other Assumptions

1. Valuation payroll (used for determining the amortization contribution rate): Prior fiscal year payroll projected forward one year using the overall payroll growth rate. This was determined separately for active employees and return to work employees by dividing the actual member contributions received during the prior fiscal year by the applicable member contribution rate for that fiscal year, and then projecting forward at 3.50%.
2. Individual salaries used to project benefits: Actual salaries from the past fiscal year are used to determine the final average salary as of the valuation date. For future salaries, the salary from the last fiscal year is projected forward with one year's salary scale.
3. Pay increase timing: Beginning of (fiscal) year. This is equivalent to assuming that reported salaries represent amounts paid to members during the year ended on the valuation date.
4. Percent married: 100% of male and 100% of female employees are assumed to be married.
5. Age difference: Males are assumed to be four years older than their spouses.
6. Percent electing annuity on death (when eligible): All of the spouses of vested, married participants are assumed to elect an immediate life annuity.
7. Inactive Population: All non-vested members are assumed to take an immediate refund. Vested members are assumed to take a deferred retirement benefit.
8. There will be no recoveries once disabled.
9. Decrement timing: Decrements of all types are assumed to occur mid-year.
10. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
11. Decrement relativity: Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
12. Incidence of Contributions: Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made.
13. Benefit Service: All members are assumed to accrue 1 year of eligibility service each year.

Participant Data

Participant data was supplied in electronic text files. There were separate files for (i) active and inactive members, and (ii) members and beneficiaries receiving benefits.

The data for active members included birth date, gender, service with the current city and total vesting service, salary, and employee contribution account balances. For retired members and beneficiaries, the data included date of birth, gender, spouse's date of birth (where applicable), amount of monthly benefit, date of retirement, and form of payment code.

Salary supplied for the current year was based on the annualized earnings for the year preceding the valuation date.

Assumptions were made to correct for missing, bad, or inconsistent data. These had no material impact on the results presented.

APPENDIX B

BENEFIT PROVISIONS

**SUMMARY OF BENEFIT PROVISIONS FOR
SOUTH CAROLINA POLICE OFFICERS RETIREMENT SYSTEM
(PORS)**

Effective Date: July 1, 1962.

Administration: The South Carolina Retirement System, organizationally aligned as a Division of the State Budget and Control Board, is responsible for the general administrative operations and day to day management of the Plan.

Type of Plan: This is a qualified governmental defined benefit retirement plan. Under GASB 25, it is considered to be a cost-sharing multiple-employer plan.

Eligibility: This System covers police officers and firefighters employed by the state, and any participating political subdivision, agency, or department of the state. With the exception for magistrates and probate judges, eligible public safety employees must earn at least \$2,000 per year and devote at least 1,600 hours per year, unless exempted by statute.

Employee Contributions: Members will contribute 7.00%, 7.50% of earnable compensation for FY 2013 and 2014 respectively. The member contribution rate for FY 2015 and thereafter is 8.00%. Furthermore, in the event that these contribution rates are insufficient to maintain a 30-year amortization period, the Board shall increase the employer and member contribution rates by an equal amount (i.e. maintain at least a 5.00% differential between the employer and member rates) as necessary to maintain a 30-year funding period. The employer and member contribution rates may not decrease until the plan attains a 90% funded ratio. These contributions are "picked-up" under Section 414(h) of the Internal Revenue Code. Contributions are credited with interest at the rate of 4.0% per annum while the member is active. Members do not earn interest on their employee contribution account balance while they are inactive.

Average Final Compensation (AFC): The monthly average of the member's highest twelve (12) consecutive quarters of earnable compensation (20 consecutive quarters for Class Three members, members who are hired after June 30, 2012). Earnable compensation is the compensation that would be payable to a member if the member worked a full, normal working time, which includes gross salary, overtime, sick pay, and deferrals. The calculation of a member's AFC also includes up to 45 days pay for unused annual leave paid at termination.

Members joining the System after January 1, 1996, have their compensation limited in accordance with IRC Section 401(a)(17) for determining benefits.

Service Retirement:

- a. **Eligibility:** A Class Two member may retire with an unreduced benefit at age 55 or after 25 years of creditable service, if earlier. The member must also have a minimum of 5 years of “earned” service to qualify for retirement. Class Three members may retire with an unreduced benefit at age 55 or after 27 years of creditable service, if earlier. Class Three members must also have a minimum of 8 years of “earned” service to qualify for retirement.
- b. **Monthly Benefit:** 2.14% times Average Final Compensation (AFC) times years of creditable service. Class Two members will receive service credit for up to 90 days of unused sick leave where twenty days of sick leave constitutes one month of service credit.
- c. **Payment Form:** Maximum retirement allowance (Option A) and survivor allowances under Options B and C.

Disability Retirement:

- a. **Eligibility:** Member must be have five or more years of earned service (8 years for Class Three members), unless the disability is due to performing his or her job duties. Member who apply for a disability retirement benefit after December 31, 2013 must provide proof to the system that they are entitled to Social Security disability benefits after their third year of retirement in order to continue receiving their disability retirement allowance.
- b. **Monthly Benefit:**
The monthly benefit is equal to the member’s service retirement benefit that would have been payable based on the member’s AFC determined as of the date of his disability and a projected credited service amount that assumes the member continued employment to age 55, not to exceed their current service or 25 years. However, a member must receive a disability retirement allowance equal to at least 15% of his AFC.
- c. **Payment Form:** Maximum retirement allowance (Option A) and survivor allowances under Options B and C.
- d. **Death while Disabled:** A disabled member is treated as a retired member for purposes of determining a death benefit.

Vesting and Refunds:

- a. **Eligibility:** All members who are not vested are eligible for a refund when they terminate service. Class Two members are vested after five years of earned service. Class Three members are vested after eight years of earned service. Vested members may also elect to receive a refund in lieu of the deferred termination benefit described below.
- b. **Amount:** The refund benefit is the accumulated value of the member's contributions plus interest credited by the fund. Members do not earn interest on their employee contribution account balance while they are inactive.

Deferred Termination Benefit:

- a. **Eligibility:** Member must be vested (5 years of earned service) and must elect to leave his/her contributions on deposit.
- b. **Monthly Benefit:** Same as the unreduced or reduced service retirement benefit, based on service and AFC at termination, and commencing once the member is eligible.
- c. **Payment Form:** Maximum retirement allowance (Option A) and survivor allowances under Options B and C.
- d. **Death Benefit:** The beneficiary of an inactive member who dies is entitled to receive the amount of the member's accumulated contributions (with interest). In accordance with administrative policy, if the member met service eligibility requirements at their time of death, the beneficiary is eligible for a monthly survivor annuity benefit.

Death while an Active Member:

Members who die while actively employed will receive the regular death benefit described below. If the member was an employee of an employer participating in the Accidental Death Benefit Program and/or the Preretirement Death Benefit Program, then the beneficiary will receive additional death benefits.

Regular Death Benefit:

- a. **Refund:** In the event of a death of an active member (duty or non-duty related), a refund of the member's accumulated contributions (with interest), subject to a minimum refund of \$1,000, is paid to the beneficiary of a deceased member.
- b. **Beneficiary Annuity:** If the deceased member (i) has 5 or more years of earned service and (b) attained age 55 or accumulated 15 or more years of creditable service, the beneficiary may elect to receive, in lieu of the accumulated contributions, a monthly benefit for life of the beneficiary determined under "Option B" described under the Optional Forms of Benefit. For purposes of the benefit calculation, a member under the age of 55 is assumed to be 55 years of age.

Accidental Death Benefit Program:

The statutory beneficiary (i.e. surviving spouse, child, or parent of the member) of an active employee of an employer participating in the Accidental Death Benefit Program who dies as a result of a duty related event is entitled to the following beneficiary annuity.

- a. **Beneficiary Annuity:** In the event a member dies as a result of a duty related event, a monthly benefit is provided for the duration of the beneficiary's lifetime equal to 50% of the member's compensation at the time of death.

Optional Forms of Benefit: The Systems permit members to elect from three forms of benefit at retirement. In each case the benefit amount is adjusted to be actuarially equivalent to the "Option A" form. The optional forms are:

- a. Option A (Maximum Retirement Allowance): A life annuity. Upon the member's death, any remaining member contributions will be paid to the member's designated beneficiary.
- b. Option B (100% Joint & Survivor with Pop-up): A reduced annuity payable as long as either the member or his/her beneficiary is living. In the event the member's designated beneficiary predeceases the member, then the member shall receive a retirement allowance equal to the maximum retirement allowance (Option A), plus any applicable cost of living increases that would have been granted.
- c. Option C (50% Joint & Survivor with Pop-up): A reduced annuity payable during the member's life, and continues after the member's death at 50% of the rate paid to the member for the life of the member's designated beneficiary. In the event the member's designated beneficiary predeceases the member, then the member shall receive a retirement allowance equal to the maximum retirement allowance (Option A), plus any applicable cost of living increases that would have been granted.

Incidental Death Benefit:

- a. **Active Employees:** The beneficiary (or estate) of an active employee of a employer participating in the Preretirement Death Benefit Program who completes at least one full year of membership service, will receive a death benefit equal to the member's annual earnable compensation at the time of death.

The one full year membership requirement is waived for members whose death is a result of an injury arising out of and in the course of performing his duties.

For purposes of determining eligibility for incidental death benefits, active employees include those members who are actively reemployed and contributing as a working retiree with a participating employer.

- b. **Post Employment:** The beneficiary (or estate) of a retiree, both current and future retiree will receive a one-time payment upon the retiree's death if the employer was participating in the Preretirement Death Benefit Program at the time of the retired member's death. The amount of the one-time payment is based on the retiree's years of credited service at retirement.

Years of Service Credit	Death Benefit
10 or more, but less than 20	\$2,000
20 or more, but less than 25	\$4,000
25 or more	\$6,000

Postretirement Benefit Increases: Benefits paid to retired members or surviving spouses are increased annually in an amount equal to the lesser of 1.00% of the pension benefit or \$500 beginning on the July 1st following the receipt of 12 monthly benefit payments. The \$500 limit in the annual increase is not indexed to escalate in future years.

APPENDIX C

GLOSSARY

GLOSSARY

Actuarial Accrued Liability (AAL): That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of Future Plan Benefits which is not provided for by future Normal Costs. It is equal to the Actuarial Present Value of Future Plan Benefits minus the actuarial present value of future Normal Costs.

Actuarial Assumptions: Assumptions as to future experience under the Fund. These include assumptions about the occurrence of future events affecting costs or liabilities, such as:

- mortality, withdrawal, disablement, and retirement;
- future increases in salary;
- future rates of investment earnings and future investment and administrative expenses;
- characteristics of members not specified in the data, such as marital status;
- characteristics of future members;
- future elections made by members; and
- other relevant items.

Actuarial Cost Method or Funding Method: A procedure for allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability. These items are used to determine the ARC.

Actuarial Gain or Actuarial Loss: A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. Through the actuarial assumptions, rates of decrements, rates of salary increases, and rates of fund earnings have been forecasted. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge which may be the same as forecasted, or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., the Fund's assets earn more than projected, salaries do not increase as fast as assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results that produce actuarial liabilities which are larger than projected. Actuarial gains will shorten the time required for funding of the actuarial balance sheet deficiency while actuarial losses will lengthen the funding period.

Actuarially Equivalent: Of equal actuarial present value, determined as of a given date and based on a given set of Actuarial Assumptions.

Actuarial Present Value (APV): The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. For purposes of this standard, each such amount or series of amounts is:

- a. adjusted for the probable financial effect of certain intervening events (such as changes in compensation levels, marital status, etc.)

b. multiplied by the probability of the occurrence of an event (such as survival, death, disability, termination of employment, etc.) on which the payment is conditioned, and

c. discounted according to an assumed rate (or rates) of return to reflect the time value of money.

Actuarial Present Value of Future Plan Benefits: The Actuarial Present Value of those benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits. The Actuarial Present Value of Future Plan Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive, nonretired members either entitled to a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would be provide sufficient assets to pay all projected benefits and expenses when due.

Actuarial Valuation: The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial valuation for a governmental retirement system typically also includes calculations of items needed for compliance with GASB 25, such as the funded ratio and the ARC.

Actuarial Value of Assets or Valuation Assets: The value of the Fund's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets, but commonly actuaries use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the ARC.

Actuarially Determined: Values which have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.

Amortization Method: A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.

Amortization Payment: That portion of the pension plan contribution or ARC which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

Annual Required Contribution (ARC): The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation, determined under GASB 25. The ARC consists of the Employer Normal Cost and the Amortization Payment

Closed Amortization Period: A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc. See Funding Period and Open Amortization Period.

Decrements: Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or termination.

Defined Benefit Plan: A retirement plan that is not a Defined Contribution Plan. Typically a defined benefit plan is one in which benefits are defined by a formula applied to the member's compensation and/or years of service.

Defined Contribution Plan: A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, and the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.

Employer Normal Cost: The portion of the Normal Cost to be paid by the employers. This is equal to the Normal Cost less expected member contributions.

Experience Study: A periodic review and analysis of the actual experience of the Fund which may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.

Funded Ratio: The ratio of the actuarial value of assets (AVA) to the actuarial accrued liability (AAL). Plans sometimes calculate a market funded ratio, using the market value of assets (MVA), rather than the AVA, although GASB 25 reporting requires the use of the AVA.

Funding Period or Amortization Period: The term "Funding Period" is used in two ways. In the first sense, it is the period used in calculating the Amortization Payment as a component of the ARC. This funding period is chosen by the Board of Trustees. In the second sense, it is a calculated item: the number of years in the future that will theoretically be required to amortize (i.e., pay off or eliminate) the Unfunded Actuarial Accrued Liability, based on the statutory employer contribution rate, and assuming no future actuarial gains or losses.

GASB: Governmental Accounting Standards Board.

GASB 25 and GASB 27: Governmental Accounting Standards Board Statements No. 25 and No. 27. These are the governmental accounting standards that set the accounting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 27 sets the accounting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 25 sets the rules for the systems themselves.

Normal Cost: That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method. Any payment in respect of an Unfunded

Actuarial Accrued Liability is not part of Normal Cost (see Amortization Payment). For pension plan benefits which are provided in part by employee contributions, Normal Cost refers to the total of employee contributions and employer Normal Cost unless otherwise specifically stated. Under the entry age normal cost method, the Normal Cost is intended to be the level cost (when expressed as a percentage of pay) needed to fund the benefits of a member from hire until ultimate termination, death, disability or retirement.

Open Amortization Period: An open amortization period is one which is used to determine the Amortization Payment but which does not change over time. In other words, if the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year. In theory, if an Open Amortization Period is used to amortize the Unfunded Actuarial Accrued Liability, the UAAL will never completely disappear, but will become smaller each year, either as a dollar amount or in relation to covered payroll.

Unfunded Actuarial Accrued Liability: The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets. This value may be negative in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus.

Valuation Date or Actuarial Valuation Date: The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Plan Benefits is determined. The expected benefits to be paid in the future are discounted to this date.
